There are typically very small daily Fund's NAV movements experienced by the Fund. However, the Fund's NAV may still fluctuate subject to the change in profit/interest rates. Other factors that may affect the value of your investment are failure to liquidate the underlying investments in a timely manner and inability of the issuer of the money market instruments to pay/repay the profit/interest and principal respectively.

KEY RISKS

You should be aware that –

- The value of your investment, and the distribution payable, may go down as well as up.
- The return of the Fund is not guaranteed.

Interest Rate Risk

Movements in interest rate will have an impact on a management of a fund. This risk refers to the effect of interest rate changes on the market value of Islamic money market instruments, Islamic deposit placements and sukuk. Any downward movement of the interest rate may result in a loss of the expected return from the Fund’s investments in Islamic money market instrument and Islamic deposit placement. The value of the sukuk has a tendency to move inversely with the movement of the interest rate whereby the prices of the sukuk may fall when interest rates rise, and vice versa.

The interest rate is a general indicator. Although the Fund does not invest in interest bearing instruments, the movement of the interest rate will have an impact on the profit rate of the Islamic money market instruments and Islamic deposit placement, and consequently affect the expected return of the Fund’s investments. The Fund’s future reinvestment in Islamic deposit placement will benefit from higher profit rate and in the event of a falling profit rates, the Fund’s future investment in Islamic deposit placement will be reinvested at a lower profit rate which in turn will reduce the Fund’s potential return.

Credit/Default Risk

Credit risk relates to the creditworthiness of the issuers of the sukuk and their expected ability to make timely payment of profit and/or principal. Any adverse situations faced by the issuer may impact the value as well as liquidity of the sukuk. In the case of rated sukuk, this may lead to a credit downgrade. Default risk relates to the risk that an issuer of a sukuk either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the sukuk. This could adversely affect the value of the Fund.

Shariah Status Reclassification Risk

- Islamic fixed income instruments or Islamic money market instruments or Islamic deposits.
This risk refers to the risk of a possibility that the currently held Islamic fixed income instruments or Islamic money market instruments or Islamic deposits invested by the Fund may be declared as Shariah non-compliant by the relevant authority or the Shariah Adviser. If this occurs, the Manager will take the necessary steps to dispose of or withdraw such fixed income instruments or money market instruments or deposits.

Please refer to [Section 3.5](#) of the Master Prospectus for further information on product specific risks.
